

Overcoming sampling issues in dental tribology: insights from an experimentation on sheep

APPENDIX 3. Two-way repeated measures ANOVA on Asfc and epLsar between dietary groups and between different positions on the shearing facet. Significant p-values are highlighted in bold.

Complexity (Asfc)						Anisotropy (epLsar)					
Clover + Barley	3 spots	Median	Central position	Jugal position	Lingual position	Clover + Barley	3 spots	Median	Central position	Jugal position	Lingual position
